

BIDIRCO
engineering systems

Automation and Engineering Services

Response to real needs:

- Data acquisition
- Electronic and mechanical processes optimization: efficiency and rapidity
- Process automation
- Bidirectional communication Human-Machine-Human
- Industrial processes adaptation to digital era

BIDIRCO
engineering systems

With last generation technologies:

- PLCs Programming and PC software
- Ethernet and/or Wi-Fi Communications
- Information access by Web
- Human-machine interface (HMI)
- Products identification using contactless technology

Our Services propose:

- Design of modular solutions
- Individual parameterization to the client
- Simplicity in the presented solution
- Robustness, redundancy and sustainability
- Just-in-time response
